

Spretech Sync: User Manual

Welcome to your new command center! We are so excited to get this on your desk. The Spretech Sync app is the brain behind your Macropad, designed to let you launch apps, type text, and execute complex shortcuts instantly. Let's get you set up.

To install Spretech Sync, Go to www.spretech.in, Select Mechanic Macropad in header and scroll down. The app can be downloaded by clicking the "Download App" button.

1. Getting Started

First things first, let's connect your hardware.

01

Plug In

Connect your Spretech Macropad to your PC using the included USB cable.

02

Open the App

Launch the Spretech Sync application on your Windows computer.

03

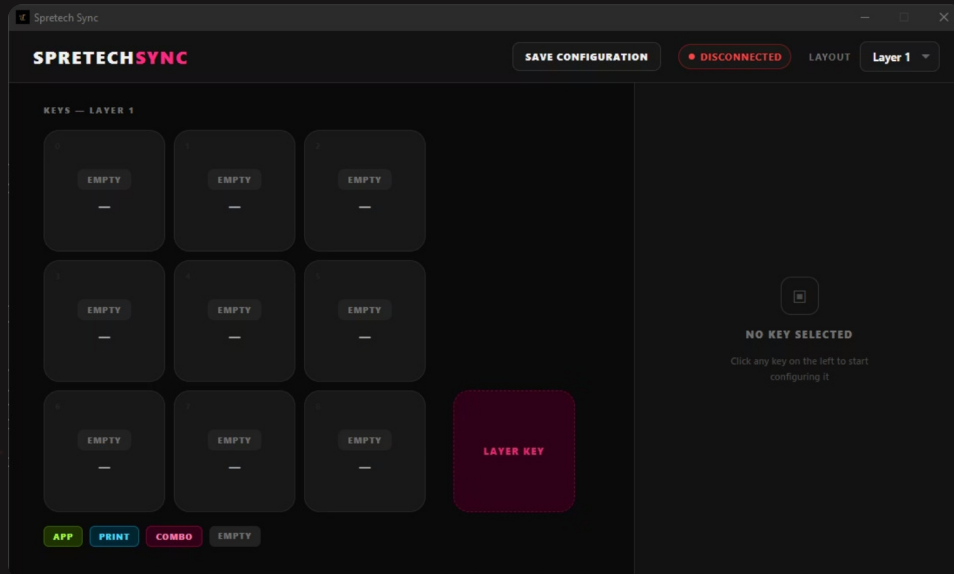

Auto-Detect

The app is smart enough to automatically find your Macropad. Once you see the big grid on your screen, you are good to go!

2. Navigating the Interface

We designed the app to feel exactly like the physical device sitting in front of you.

i 9 Keys × 9 Layers = 81 Unique Actions
Those 9 squares in the center of the app perfectly match the 9 keys on your Macropad.

Want to change what a button does? Just click its matching square on your screen.

Here is the best part: you are not limited to just 9 actions. We included 9 completely different layers. That gives you **81 unique programmable keys!** Use the Layer Dropdown at the top of the screen to switch between them.

3. Programming Your Keys

Setting up a key is super simple. When you click a square in the grid, you just need to tell it what type of action to perform, and what exactly you want it to do.

1

Click the Key

Select the square in the grid that matches the physical key you want to program.

2

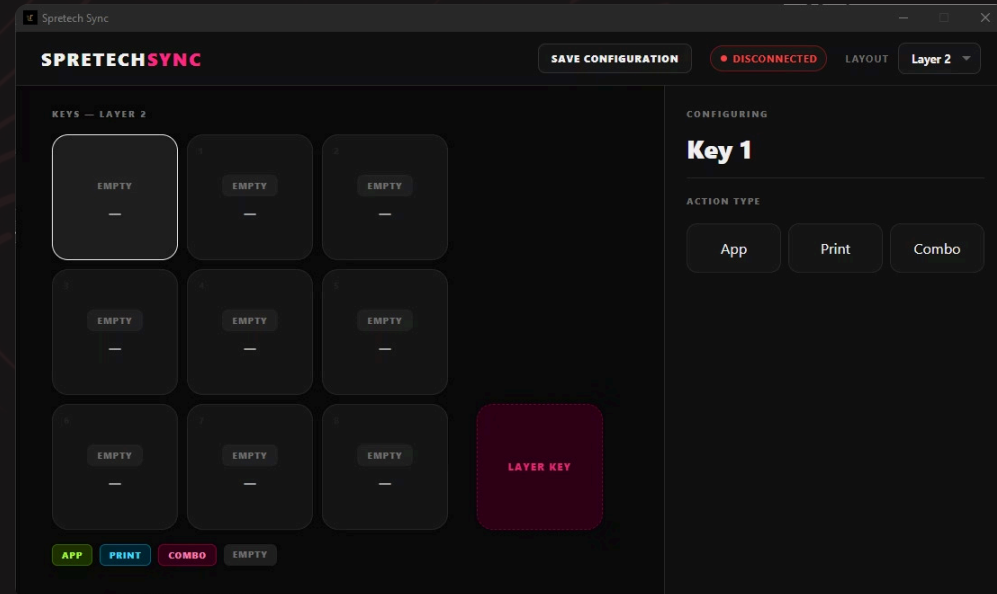

Pick an Action Type

Choose from the dropdown menu —launch an app, type text, or execute a shortcut.

3

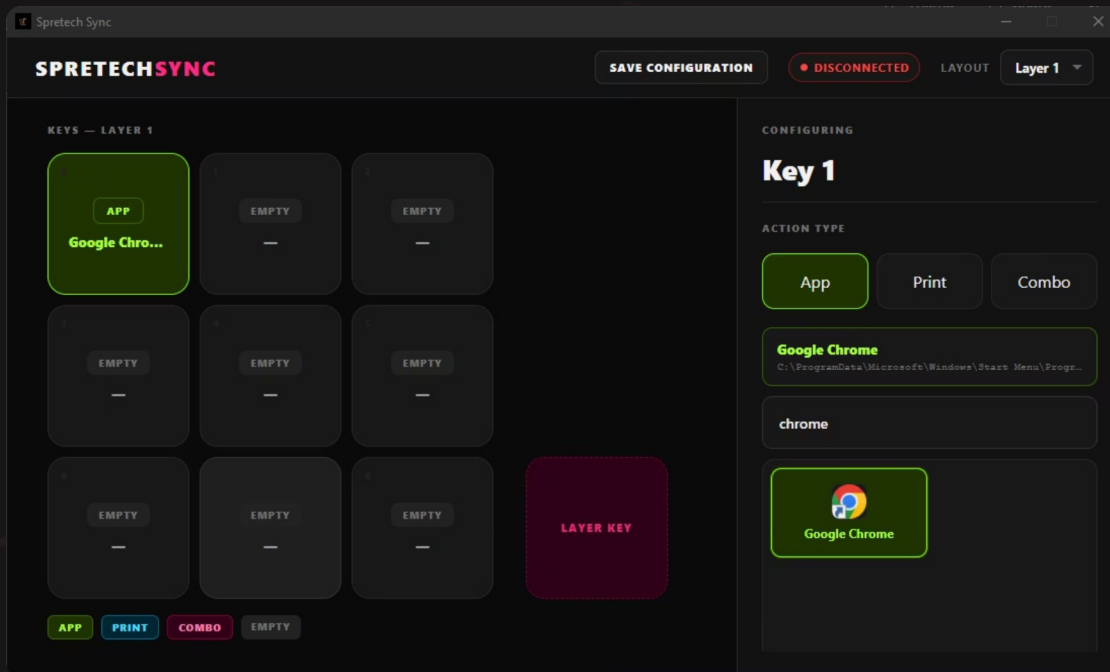

Enter Your Command

Type your specific command into the box below the dropdown and you're done.

4. Launching Programs

Use this action to open your favorite software, games, or files instantly.

How to Set It Up

Select App from the dropdown menu. In the text box, type the exact name of the shortcut you want to open.

Examples you can use right away:

- Spotify.Ink
- chrome.exe
- Photoshop.exe

5. Typing Text Automatically

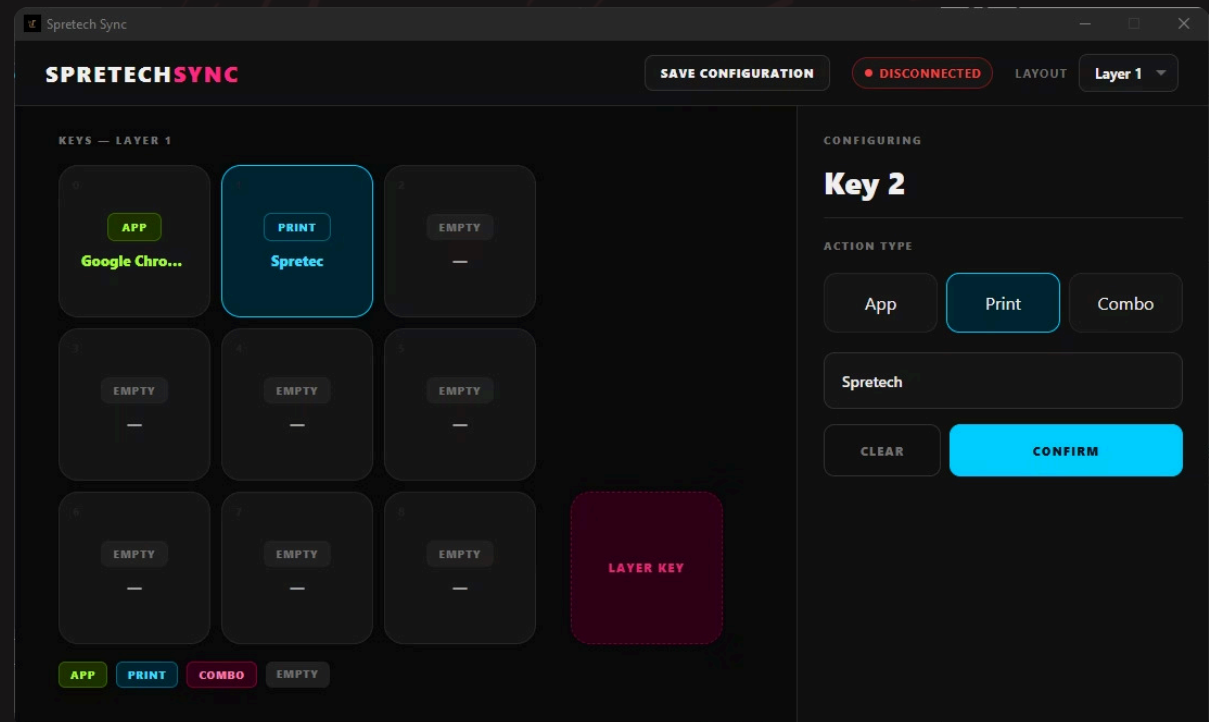

Tired of typing the same thing over and over? The Macropad will type out your text the exact millisecond you press the button.

How to Set It Up

Select Print from the menu. Then, type the exact phrase you want the Macropad to output for you.

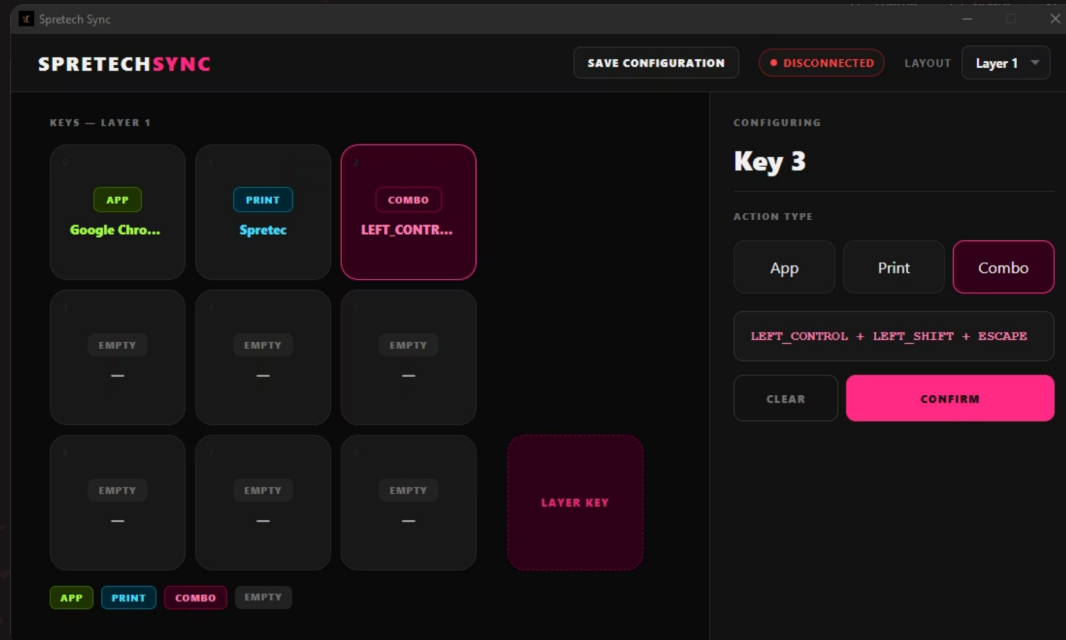

Perfect Use Cases

This is an absolute lifesaver for your email address, coding snippets, or quick chat messages for your team. Set it once, press a button, done.

6. Complex Keyboard Shortcuts

Use this action to execute tricky, multiple key shortcuts with a single press. **No more finger gymnastics!**

How to Record a Combo

Select Combo from the menu. To set this up, you don't type the names of the keys —instead, you physically press them in order!

- Click into the value box, then perform the sequence. For example, to set up Task Manager: press Control and let go → press Shift and let go → press Escape and let go. The app records your exact presses and releases to build the perfect combo.

7. Saving Your Layout

Unlike older macropads, Spretech Sync saves your layout directly to your PC. This means everything happens instantly.

Step 1

Click the Save Configuration button at the bottom of the screen.

Step 2

The button will flash "Saved locally!" to confirm it worked.

Step 3

Your macros are now live and ready to use. No annoying loading bars!

8. The Invisible Background Mode

We designed Spretech Sync to stay completely out of your way while keeping your macros active.

1

Close the Window

When you click the X to close the window, the app minimizes silently to your Windows System Tray down by your clock.

2

Stay Active

As long as the icon is hanging out in the tray, your Macropad will work perfectly in any game or app.

3

Bring It Back

Need to tweak a key? Just click the Spretech icon in your tray to bring the full menu right back up.

9. Troubleshooting & Pro Tips

Here are a couple of quick tips to help you get the absolute most out of your Spretech Macropad.

Switch Layers Without Opening the App

Press the dedicated Layer button on your physical Macropad, then press the key number of the layer you want. Fast and seamless.

Macros Not Working in a Game?

Some games have strict security that blocks virtual keystrokes. Don't panic —close Spretech Sync, right-click the app icon, and select "Run as Administrator" to bypass it.
