

SPRETECH

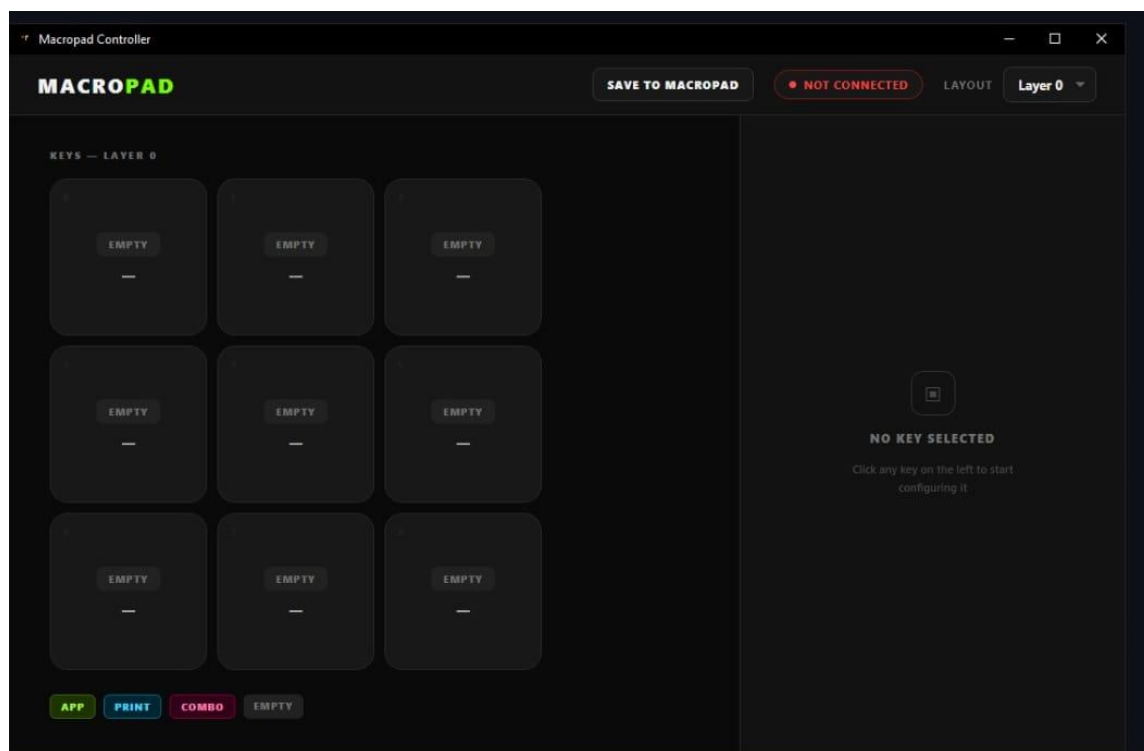

Macropad

Spretech is a technology startup focused on designing and building innovative electronics, smart devices, and practical automation tools. Our goal is to develop products that merge creativity, functionality, and real-world usability. Complete setup guide, key programming instructions, troubleshooting, and specs for your spretech macropad.

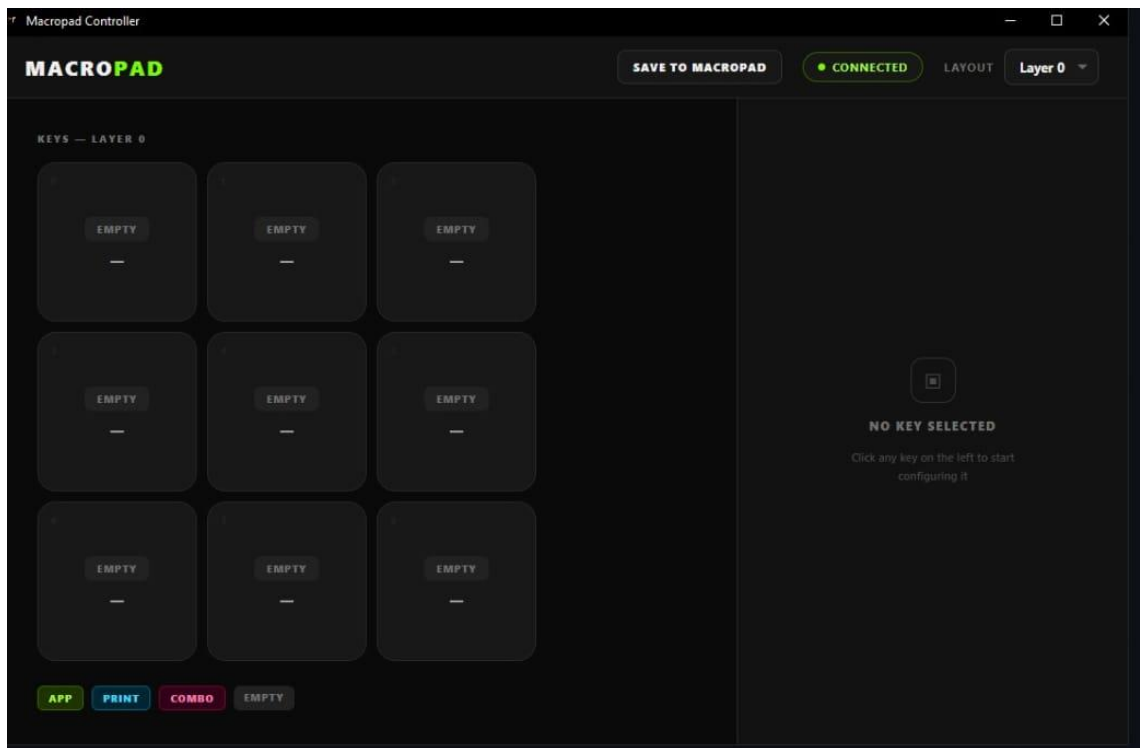

USER GUIDE

- **Firstly to customise your macropad, open macropad controller from spretech's website.**
- **After you've opened it, it should look something like this :**

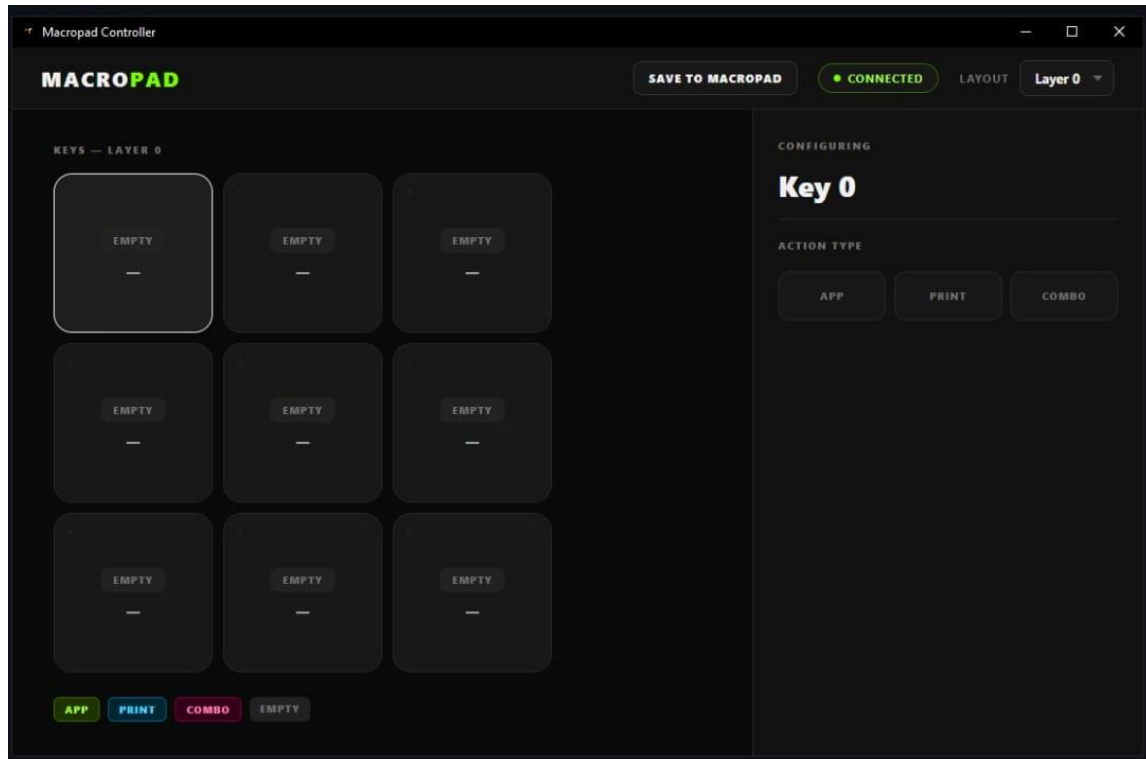

- **If you haven't connected your macropad yet, The header of the app will say "Not Connected".**

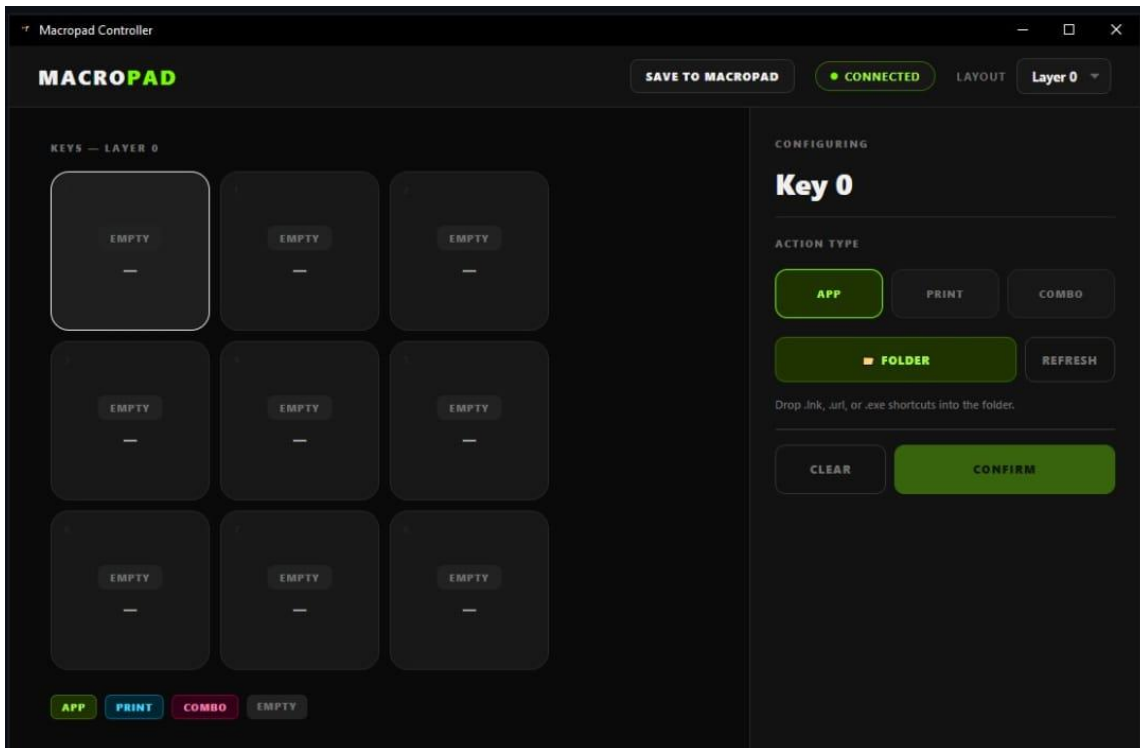

- It will change to “connected” a few seconds After you connect your macropad and will look something like this:

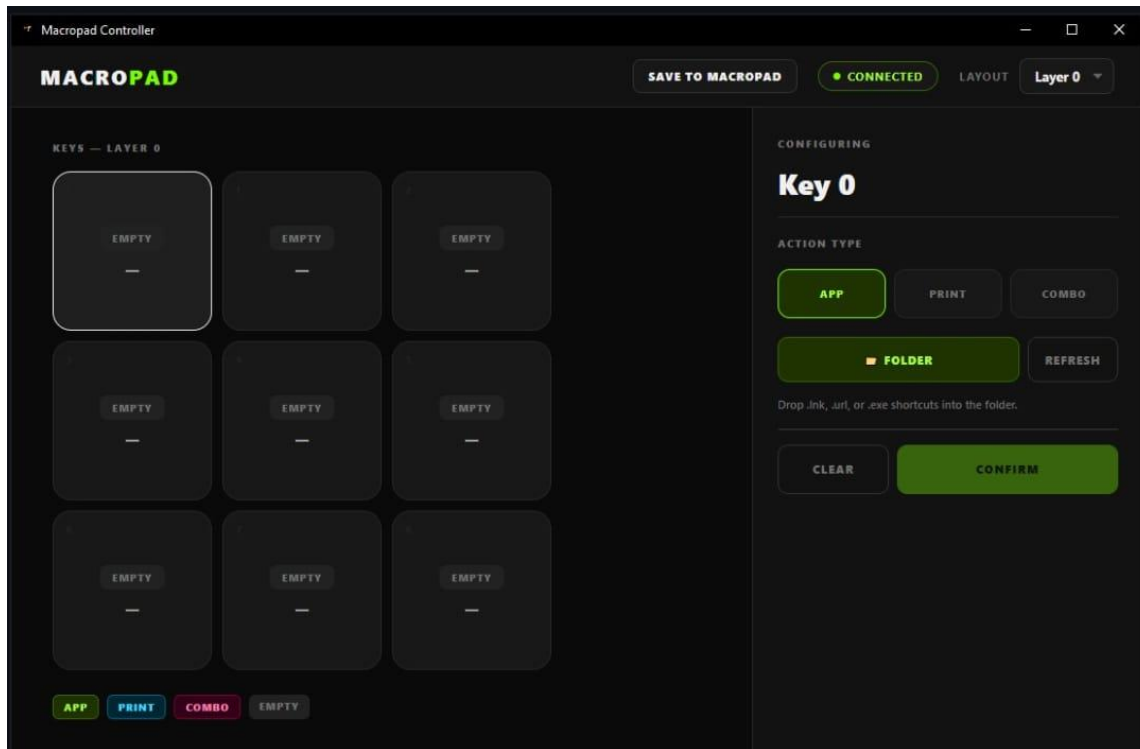

- Clicking on any one of the keys will update the right tab with features that you can use.

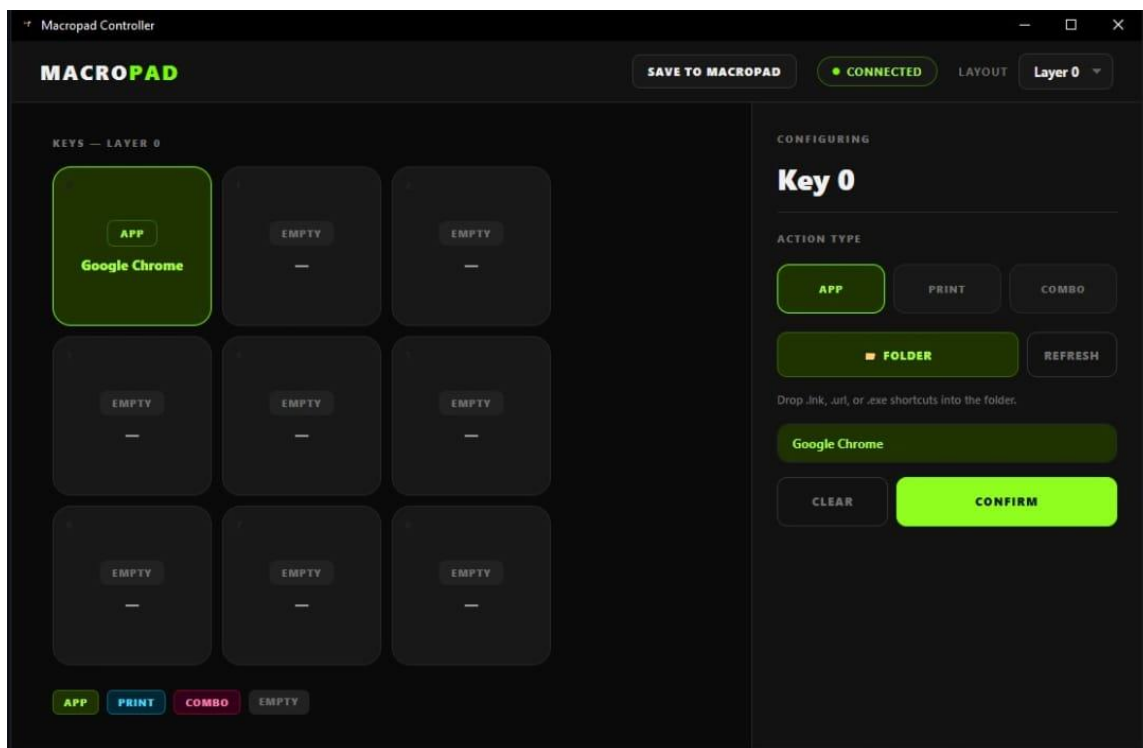

- **Let us now learn about each of the features**
- **App-lets you customise your keys to launch an app when Pressed.**
- **Upon Clicking the app button,the software will look like this:**

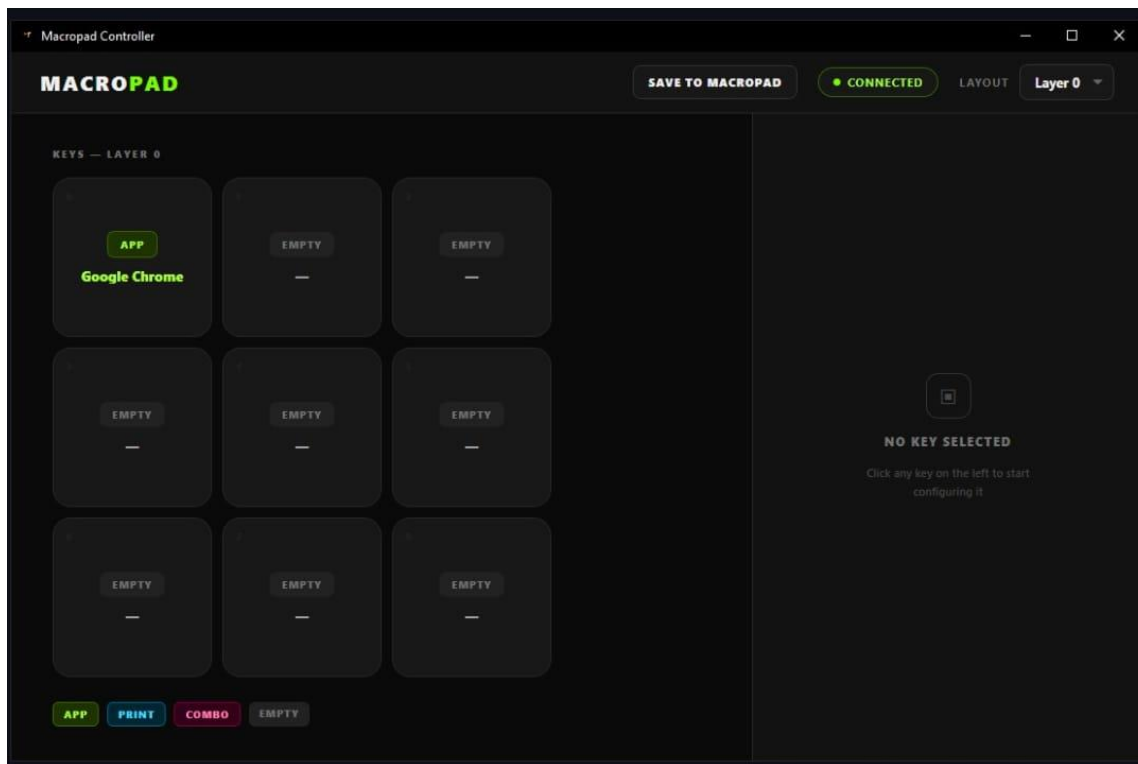

- To add an app Click on the “ folder “ button.This will take you to a folder ,where you will have to keep your respective app shortcuts which you want to open.
- I have added google-Chrome.Next close the folder.Then the UI will update as shown:

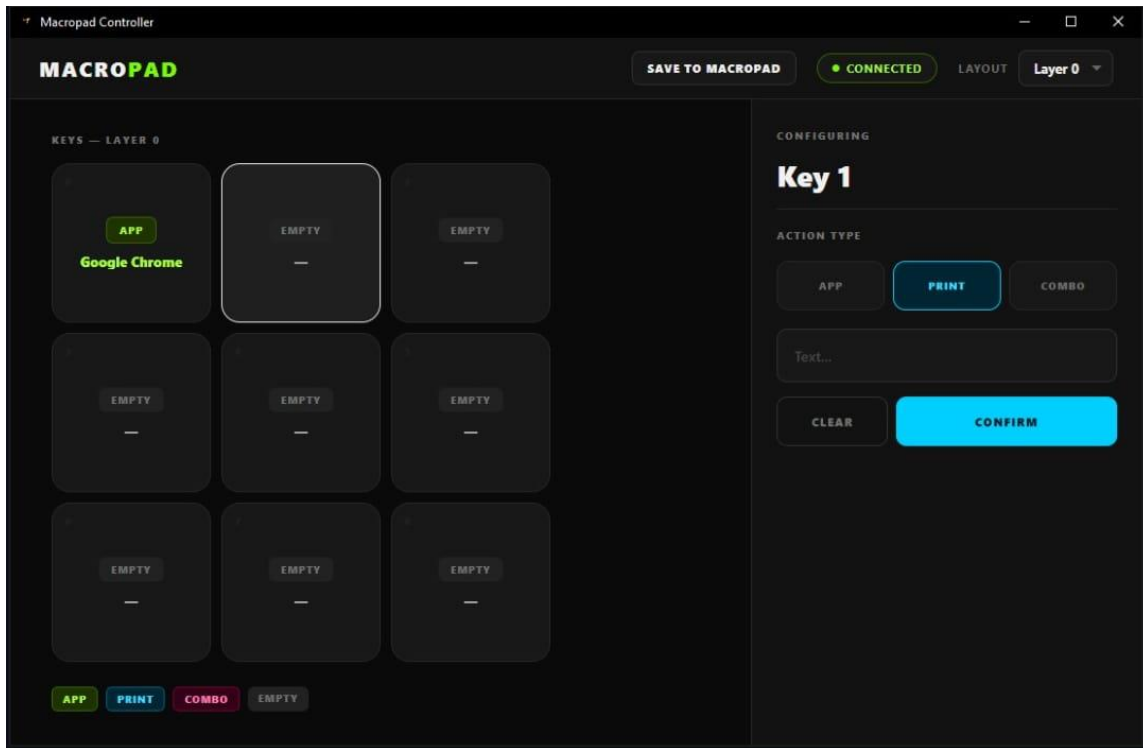

- You can then select the app and click confirm.

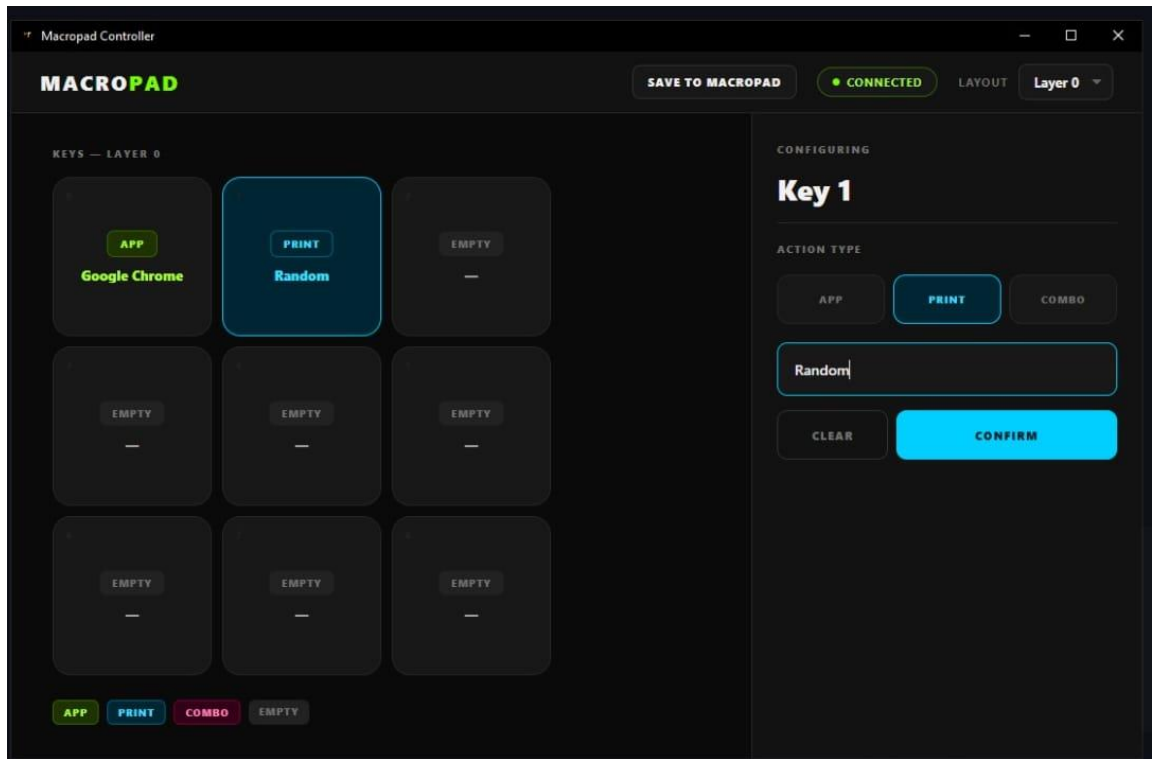

- **This will then update your main key layout as follows:**

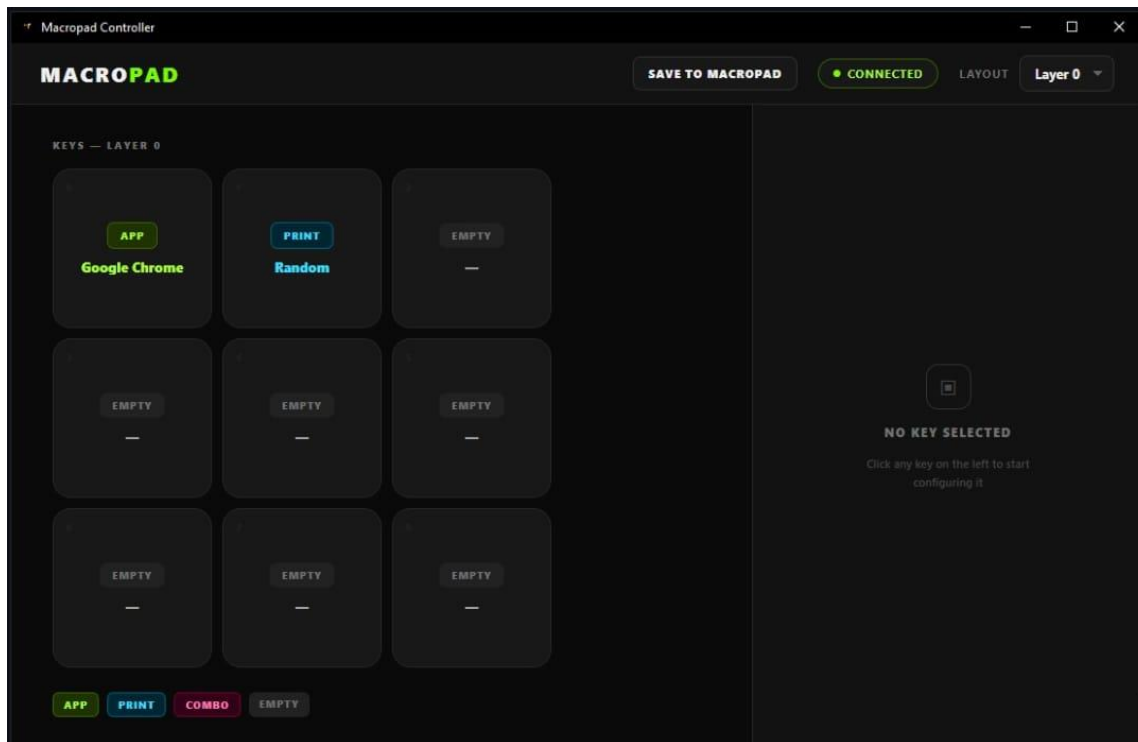

- **Print-upon pressing a key with Print function,it will Print whatever text has been given to that respective key.**
- **Click on the Print button to continue with Print function.your UI should look like this:**

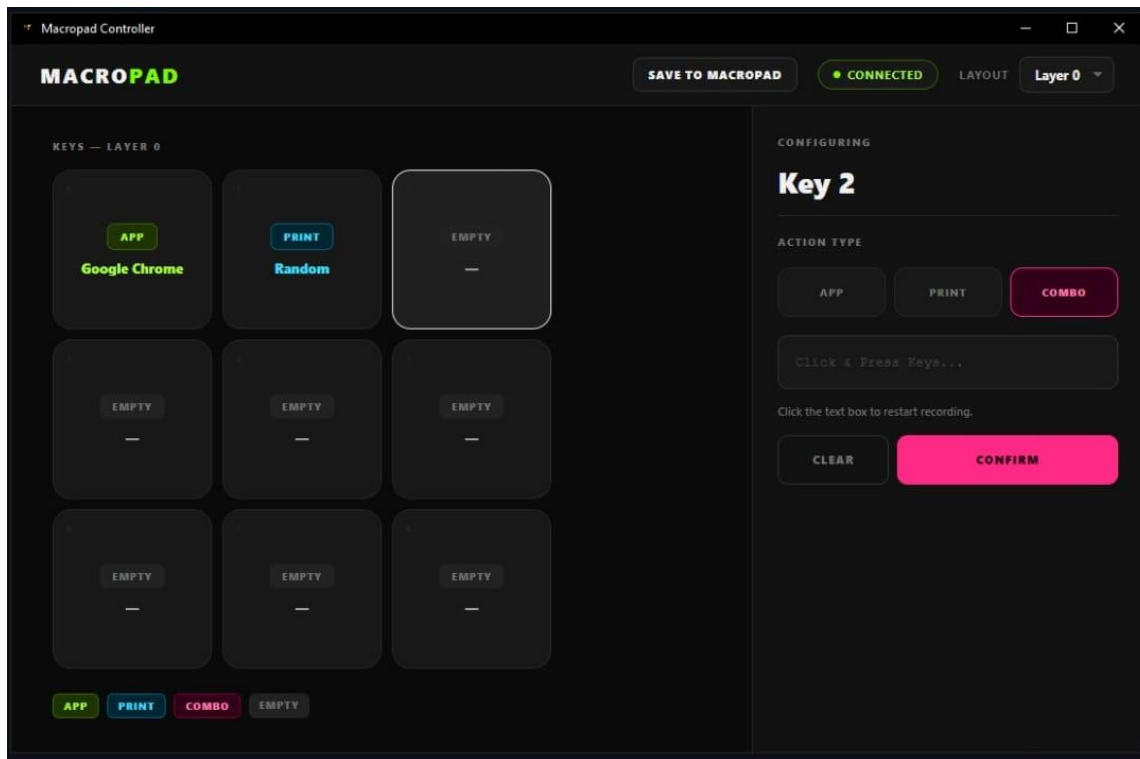

- **Then type whatever you want your key to Print. It can be anything from a letter to a large password!**

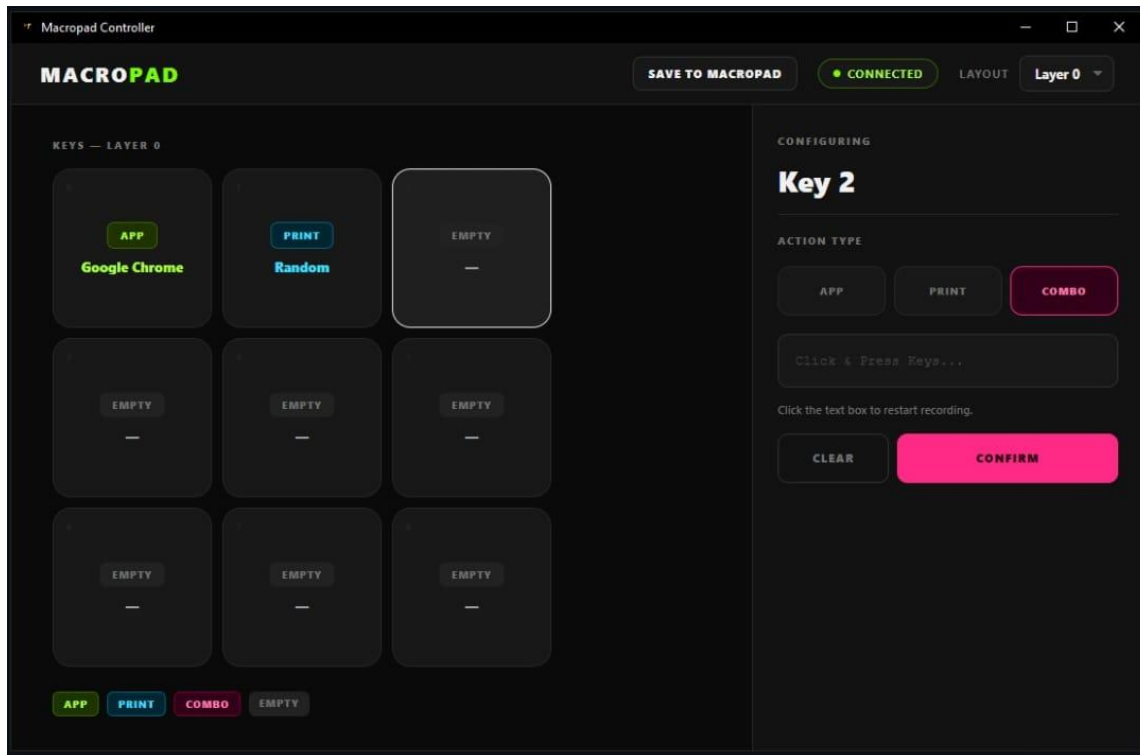

- Then Print confirm.your main UI should update to something like this:

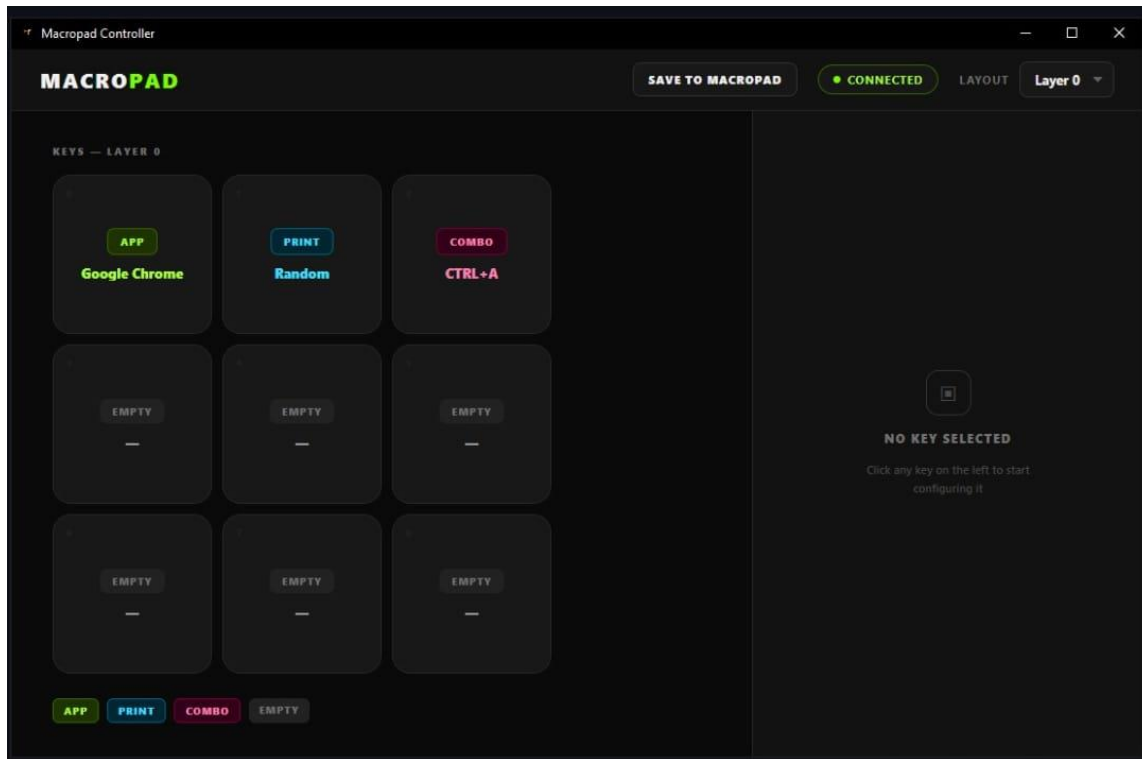

- **Combo-when pressing a key with combo function,it will executed that respective combo which the user has selected.lets say a key has “Ctrl+C” as combo,when Pressed the key will copy any text that had been selected.**
- **To continue click on the combo key to update the UI:**

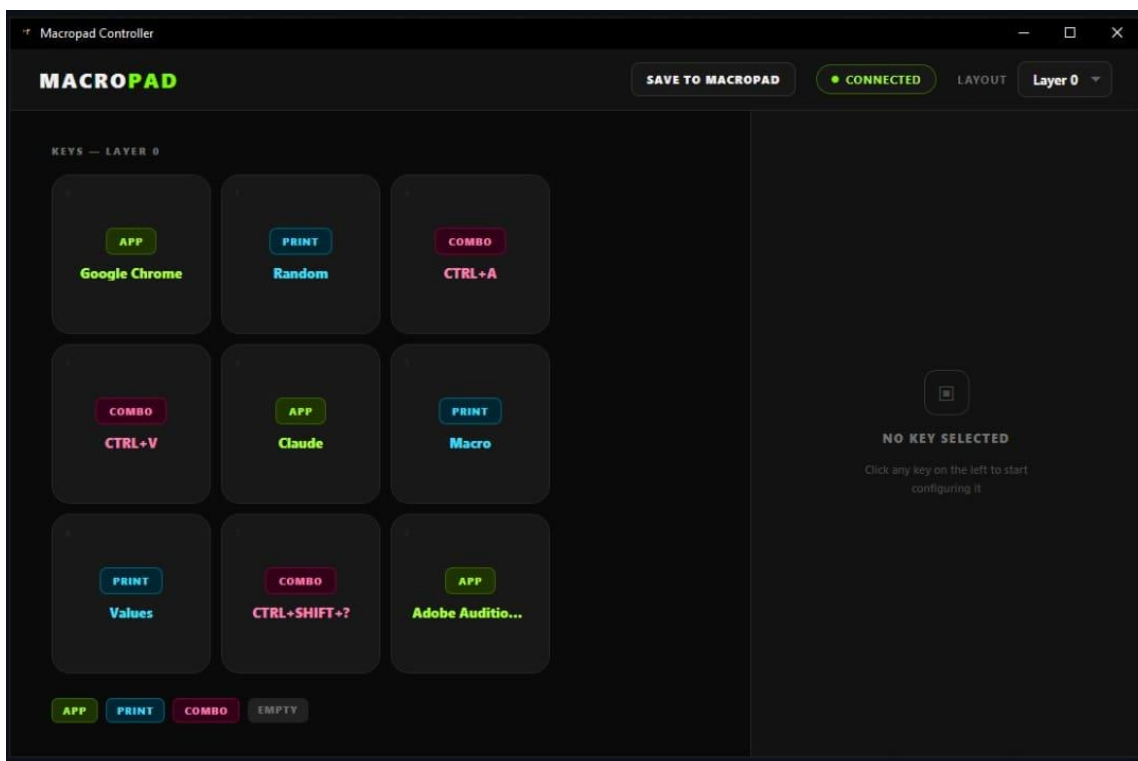

- Then click on the input field and press on your keyboard the respective combo keys that you want to register, it can be multiple at a time.
- Then hit confirm to continue

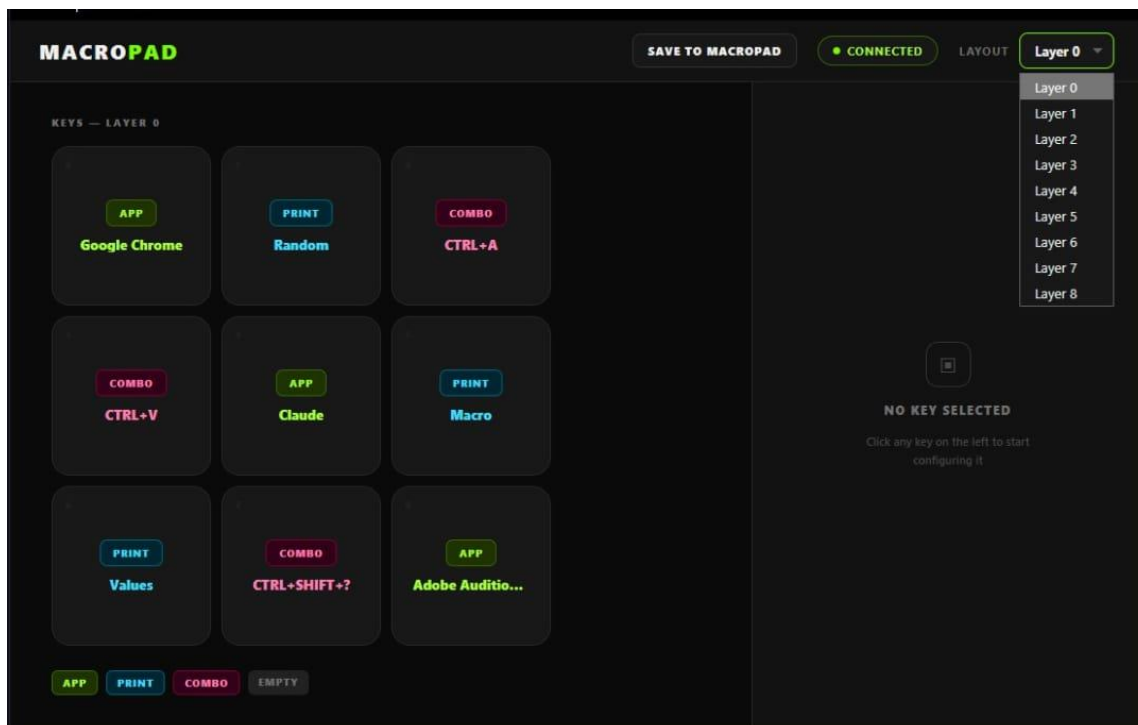

- **Your new main UI should look something like this:**

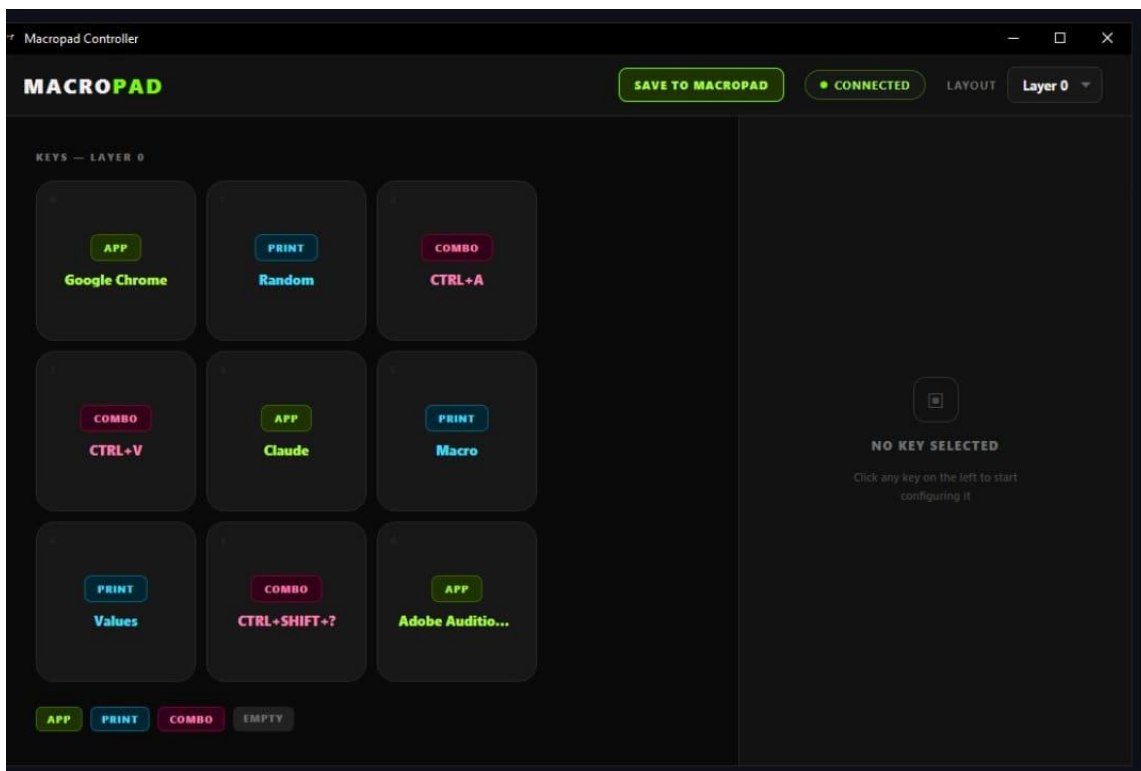

- Your final main UI might look something like this

- If you want to have more than just 9 keys and utilize the 10th key I.e the Layer key, use the Layer feature. it allows your macropad to have upto 81 functions!
- To access the layers click on the right dropdown box called “Layers”, it will introduce to 9 different layers which you can customise.

- Finally to save the layout,click on the “save to macropad”button beside “connected” status.

- **Voila! Your Macropad is set!**
